

Dear Mr. DeMayo,
April 27th, 2021

I am writing to you again to voice my continued and deep displeasure at the proposed sewer upgrade for Swan Lake. I reside at 1357 Briscoe Road and my family has been living here and enjoying the area since the late 1960's.

As mentioned prior I understand and completely support a needed upgrade to the town's sewer plant. I know that the plant is at the end of its usable life. As an elected representative I'm sure you're well aware that we are a small community and the plant currently serves only several hundred residents. As an elected representative I would like to think that your interests for swan lake dovetail with mine. However, when I look at the proposal as represented. I am dumbfounded at the extraordinary cost and that the proposal comes along with a virtual guarantee of increased residential multi-family development. The way I understand things my already bloated taxes will be going up. In addition, there will be increased traffic, noise, congestion, pollution, litter and additional weight on our already strained and barely existing town services. This doesn't strike me as a winning combination.

I ask again that you do everything in your power to work smart here and represent all of your constituents and not just a few developers with designs on large scale expansions that will come at great cost both environmentally and financially to the local residents. I cannot see why this project cannot be brought in at half its current proposed cost. Once acted upon at current proposed levels I cannot see anything but devastation and long-term negative consequences for our charming little hamlet. The board has the opportunity to do the right thing here. I hope you make the wise choice.

Regards,

Evan Beck
